Life Cycle Assessment of Swiss Chocolate Niels Jungbluth, Alex König, ESU-services Ltd, Schaffharren

https://www.esu-services.ch

SETAC Europe 24th Annual Meeting Bale, 15th May 2014

Key questions

- What are the differences between different types of chocolate?
- What are the environmental impacts of chocolate consumption?
- What are the most important aspects within the production of chocolate?
- Which potentials exist for the reduction of environmental impacts due to chocolate consumption?

Background

- Projects commissioned by German Aluminium Association (GDA) in cooperation with European Aluminium Foil Association (EAFA), Düsseldorf, Germany
- Büsser S. and Jungbluth N. (2009) LCA of Chocolate
 Packed in Aluminium Foil Based Packaging. ESU-services
 Ltd., Switzerland
- https://www.esu-services.ch/projects/packaging/
- Here we present our personal point of view

ESU-services Ltd.

- Founded in 1998 as an ETHZ spin-off
- 3 co-workers
- Long time experience since 1994 with life cycle assessment (LCA)
- Clients from industry, NGO, administration, universities
- Global LCA food database with more than 6'000 datasets

Our services

- Full-scale Life Cycle Assessments (LCA)
- Tiered LCAs
- LCI data acquisition and management (data-on-demand)
- LCA project management
- Ecolabelling concepts
- Literature surveys
- Critical peer reviews
- LCA training & coaching
- Regional SimaPro Centre (LCA software)

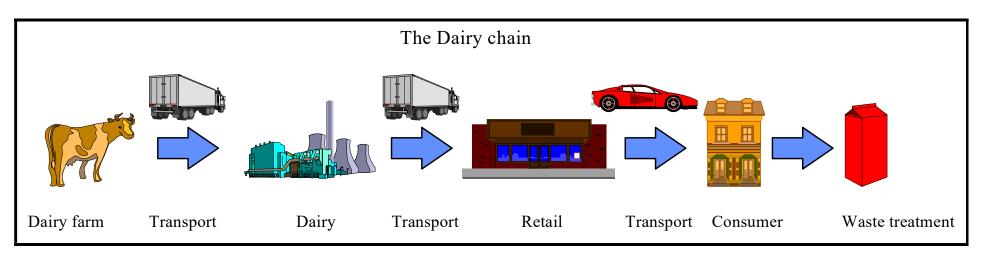

Life Cycle Assessment

- Balance of all in- and outputs
- Life cycle from cradle to grave
- Assessment of different environmental impacts (e.g. climate change, eutrophication, summer smog)
- Improvement and comparison of production processes

Life Cycle Assessment of Products

© LCA Network Food, final document

- > Cradle to grave
- > Assessment of emission to air, water and soil as well as resources (water, energy, land)
- International standardisation ISO 14040 ff
- > No absolute judgment nor accounting for social and economic aspects

Goal and Scope for this study

- Functional unit: 1 kg of chocolate for consumption in the household
- Packed in aluminium foil and wrapped with paper
- Cocoa data from Ghana
- Consumption in Europe

Included processes

Average cocoa beans cultivation worldwide Ventilated and refrigerated transport to Europe by ship Refrigerated transport from port in Europe to processing plant Processing of cocoa beans (roasting, blending, mixing, refining, grinding, etc.) in Europe Production of chocolate out of basic materials in Europe	Chocolate, at plant (ch. 2.1)	
Raw materials Production of packaging Disposal of packaging	Packaging of chocolate (ch. 2.2)	
Storage in supermarket (Refrigerated) transport of chocolate and its packaging from processing plant to supermarket	Distribution and selling of chocolate (ch. 2.3)	← Chocolate, at home
Car Public transportation Bicycle By foot	Transport supermarket to household (ch. 2.4)	
Refrigerator (Infrastructure and energy consumption)	Storage of chocolate at the household (ch. 2.4)

Life cycle impact assessment

- Evaluation of CML impact categories in original study
- Here use of the LCIA method ecological scarcity 2013 (Switzerland) to simplify the presentation
- Evaluation of greenhouse gas emissions and cumulative energy demand as most common category indicators

Impacts per process stage

Shares in chocolate production

Land use and heavy metals into soil due to agricultural production of coca beans as main environmental impact factors

Chocolate and other food products

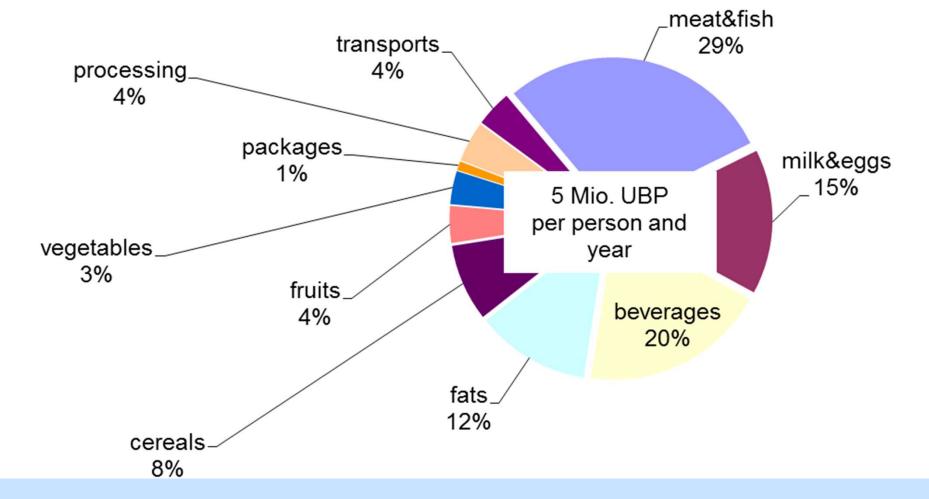

Page 17

Chocolate related to total Swiss food consumption impacts

services

consulting in sustainab

Milk chocolate consumption of 12.3 kg per year and Swiss causes about 3.5% of total impacts due to food consumption

Summary

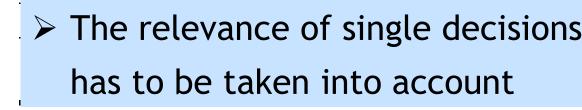

- Environmental impacts of chocolate are dominated by the agricultural production of cocoa beans and milk
- Packaging and distribution is of minor importance
- Dark chocolate has the lowest impacts
- Tax free chocolate transported by airplane can cause considerably higher impacts
- Chocolate is a product with comparable high impact

Thanks for financial contributions: German Aluminium Association (GDA) in cooperation with European Aluminium Foil Association (EAFA), Düsseldorf, Germany

5. TOTAL POTENTIALS ANALYSIS FOR THE PRESENT SITUATION IN SWITZERLAND

-services

Total potential for reduction of impacts Multiplying Reduction Potential and Share of Consumption Area

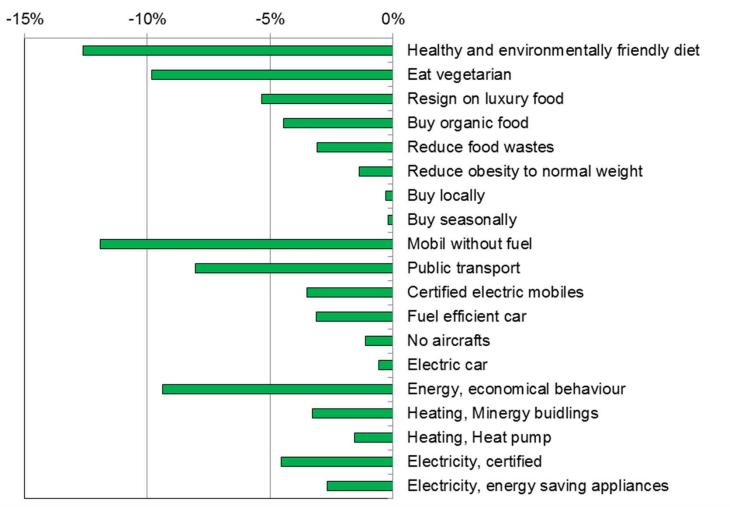

> Most relevant is a reduction of animal products

> Buying local/seasonal low potential because only vegetables and fruits affected

Summary of total potentials

> Vegetarian diet and substantial reduction of mobility demands have highest potentials

Sum-up only partly possible
